

Lesson 7 – Project 1: Basic Sales Dashboard

Step 1. Import Retail_Sales_Data.xlsx into Power BI

- Open **Power BI Desktop**.
- Go to **Home** → **Get Data** → **Excel**.
- Select **Retail_Sales_Data.xlsx** and click **Load**.

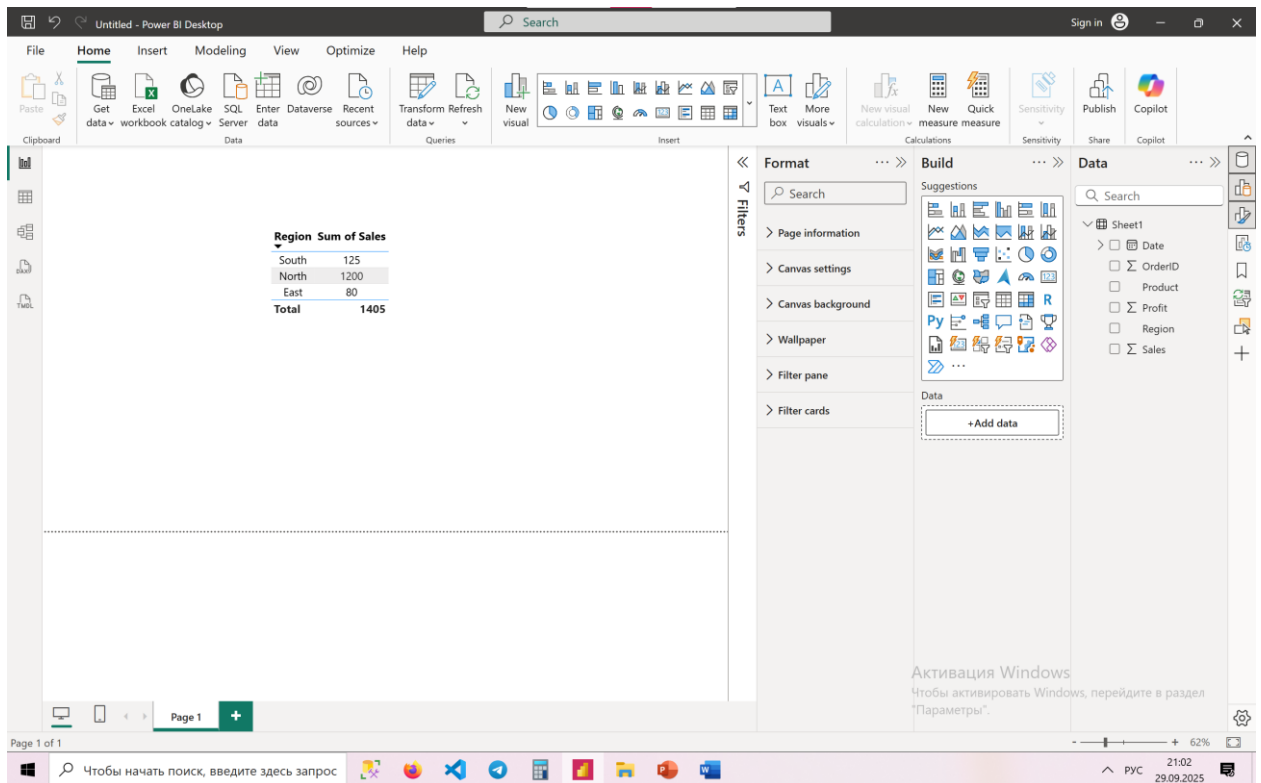

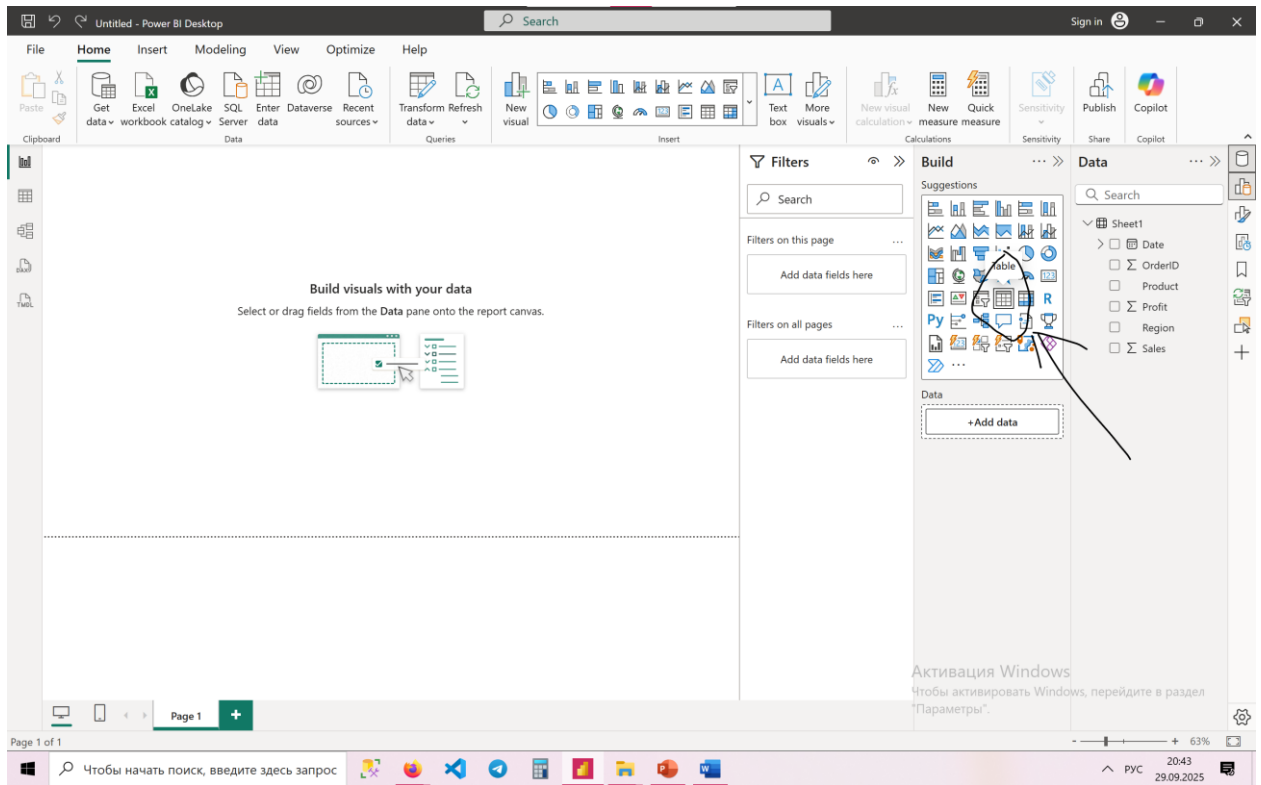

Step 2. Create a table visual showing Region and Sales

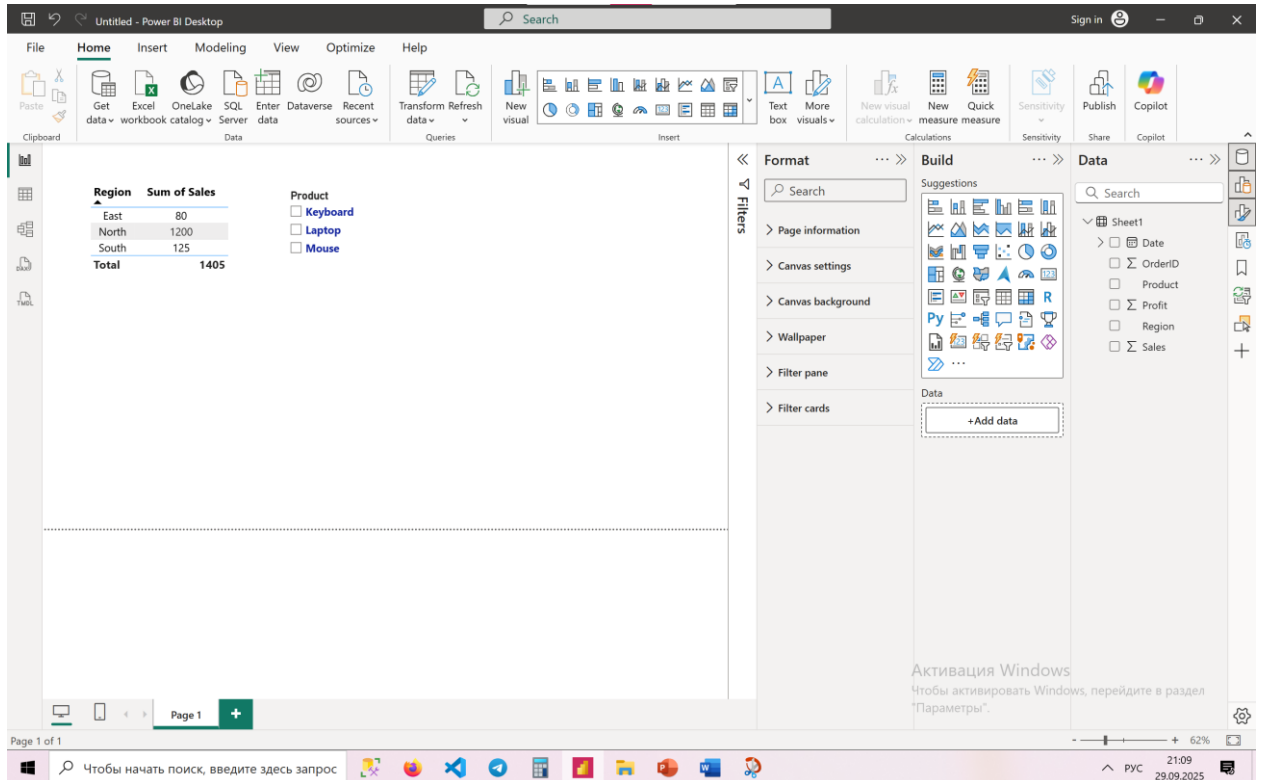

- Go to the **Report** view.

- Select **Table** from the **Visualizations** pane.
- Drag **Region** and **Sales** into the table.

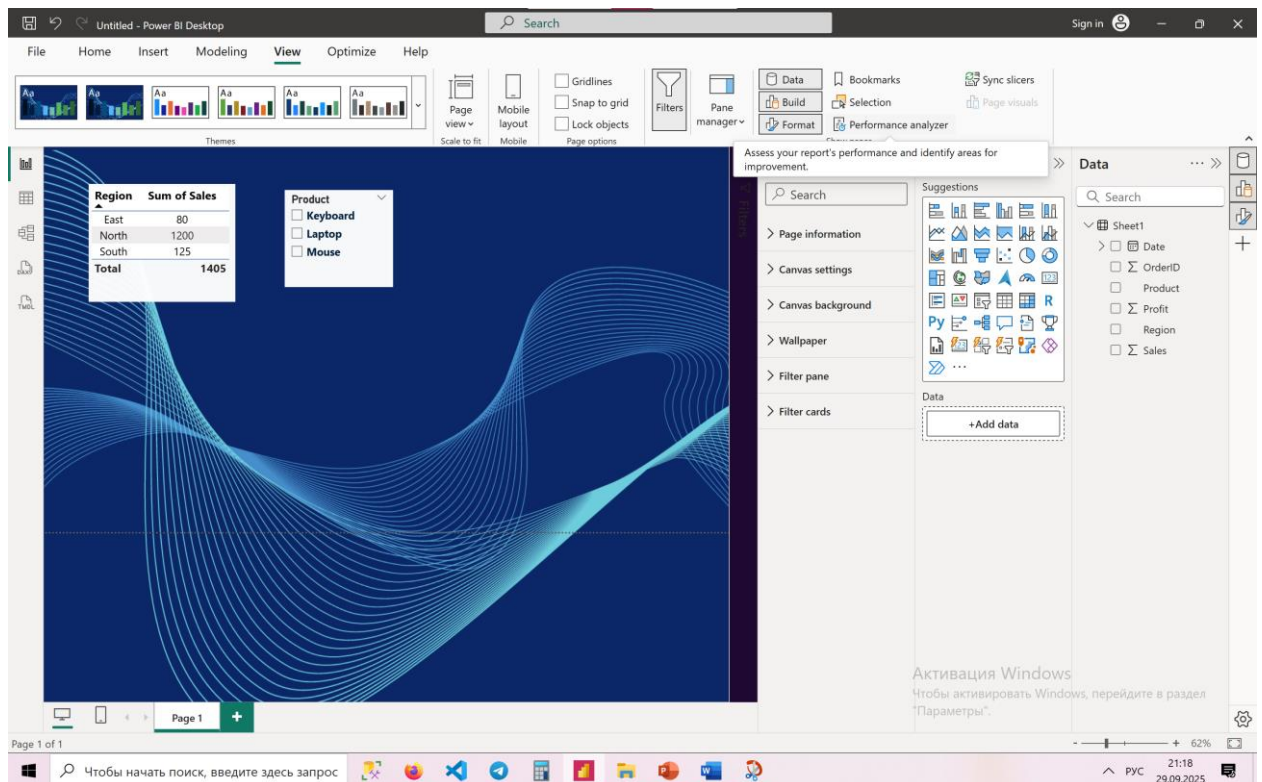

Step 3. Add a slicer for Product

- Select **Slicer** from the **Visualizations** pane.
- Drag Product into the slicer field.

Step 4. Format the dashboard theme to "Dark Mode"

- Go to **View** → **Themes** → **Dark Mode**.

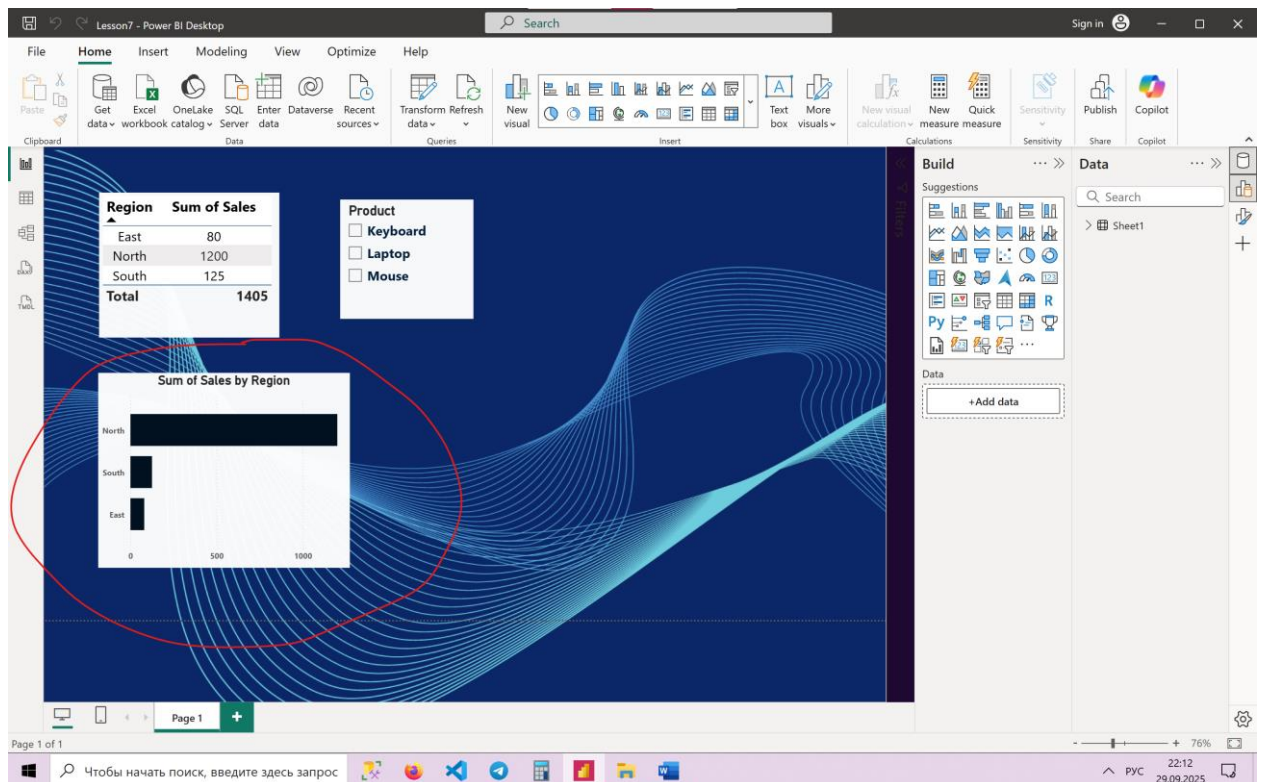

Step 5. Purpose of the Data/Model view in Power BI

- **Data view:** explore and clean the dataset.
- **Model view:** create and manage relationships between tables.

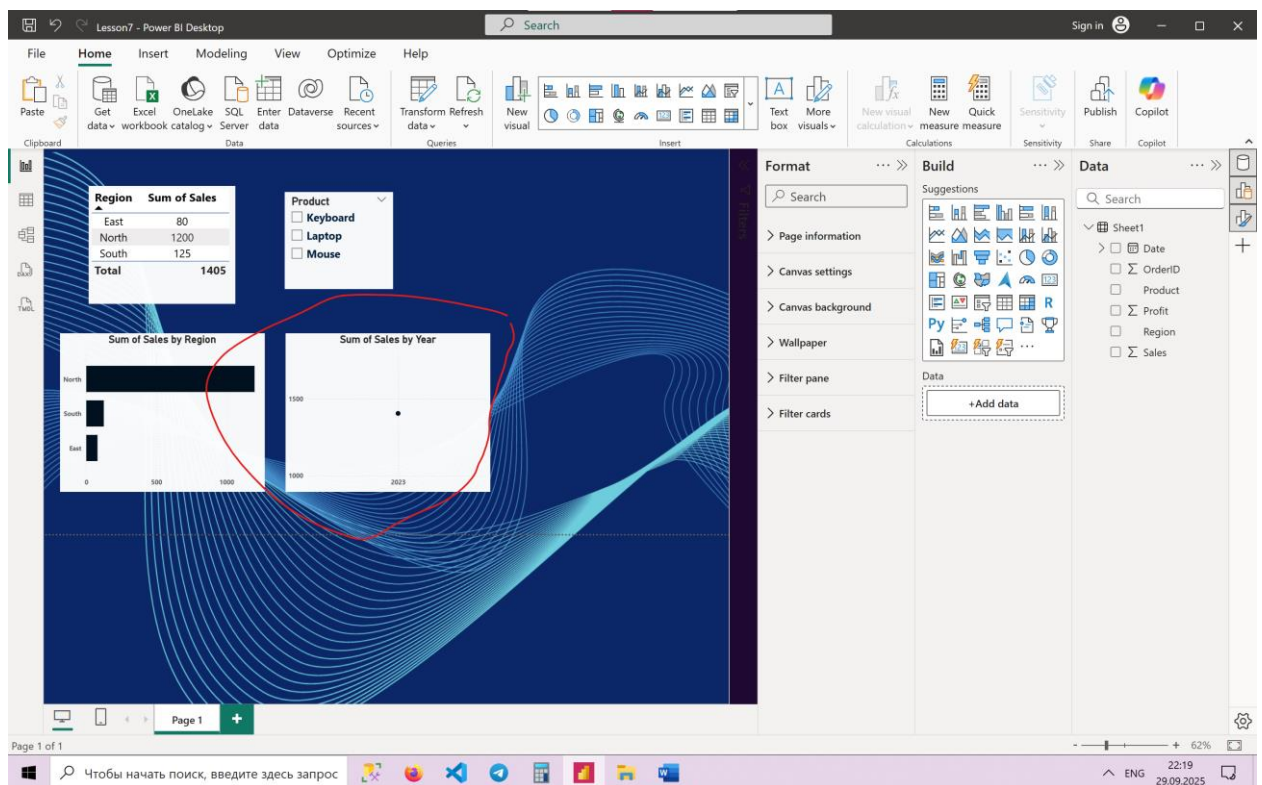

Step 6. Build a dashboard with visuals

- Add a **Bar chart**: drag Region to Axis and Sales to Values.
- Add a **Line chart**: drag Date to Axis and Sales to Values.
- Add a **Card**: drag Profit to the Card visual to show total profit.

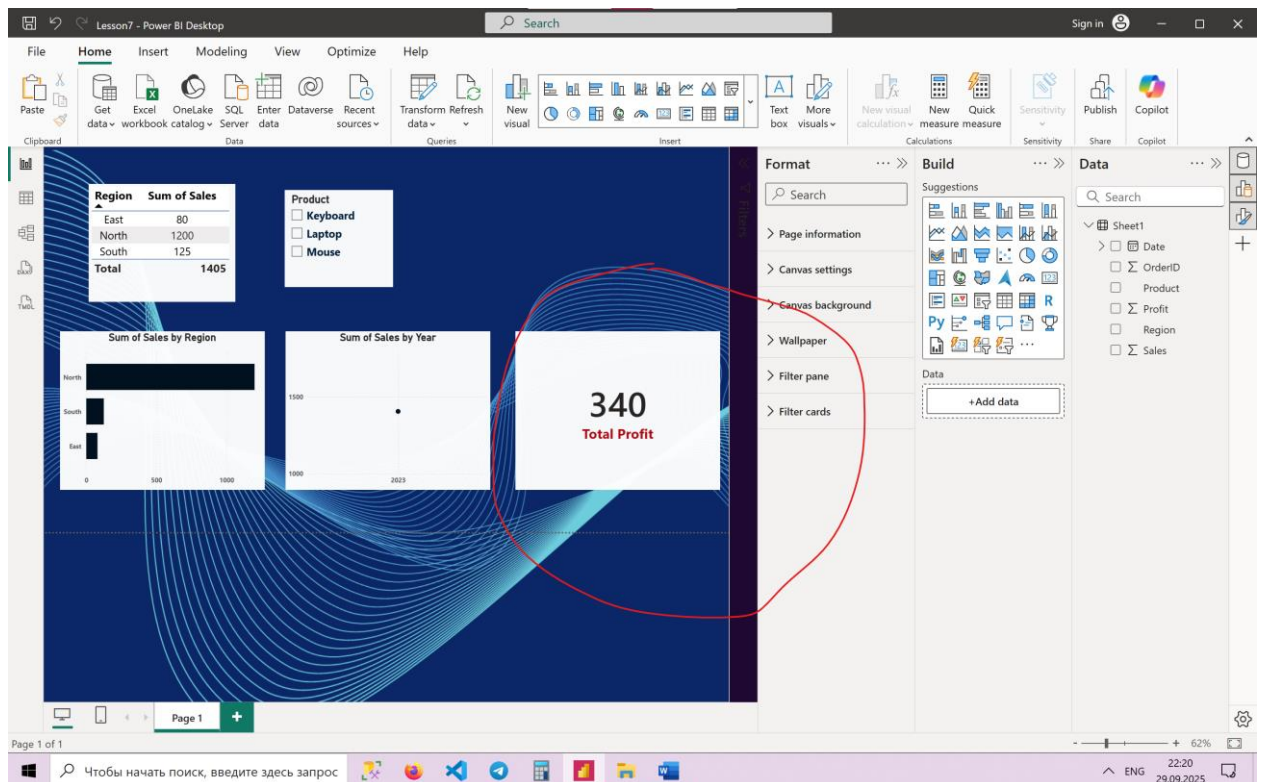

Bar chart:

Line chart:

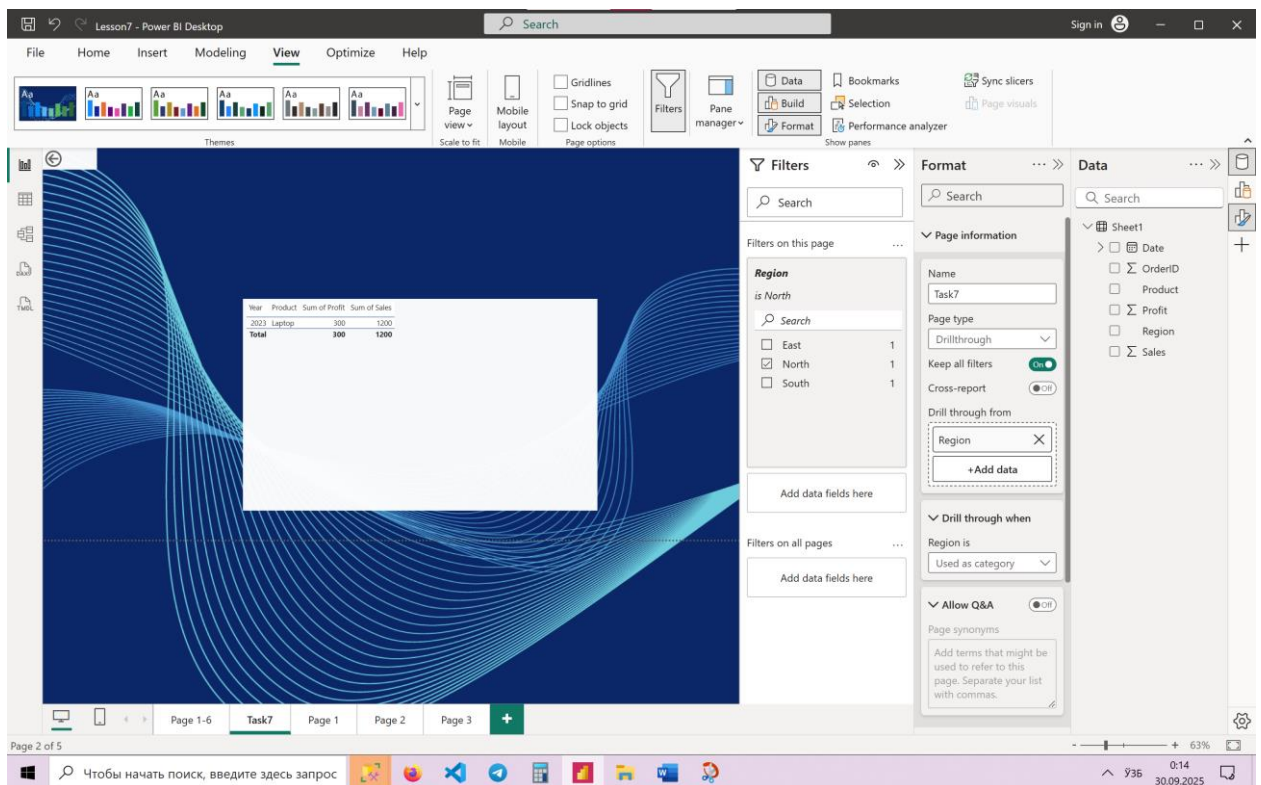

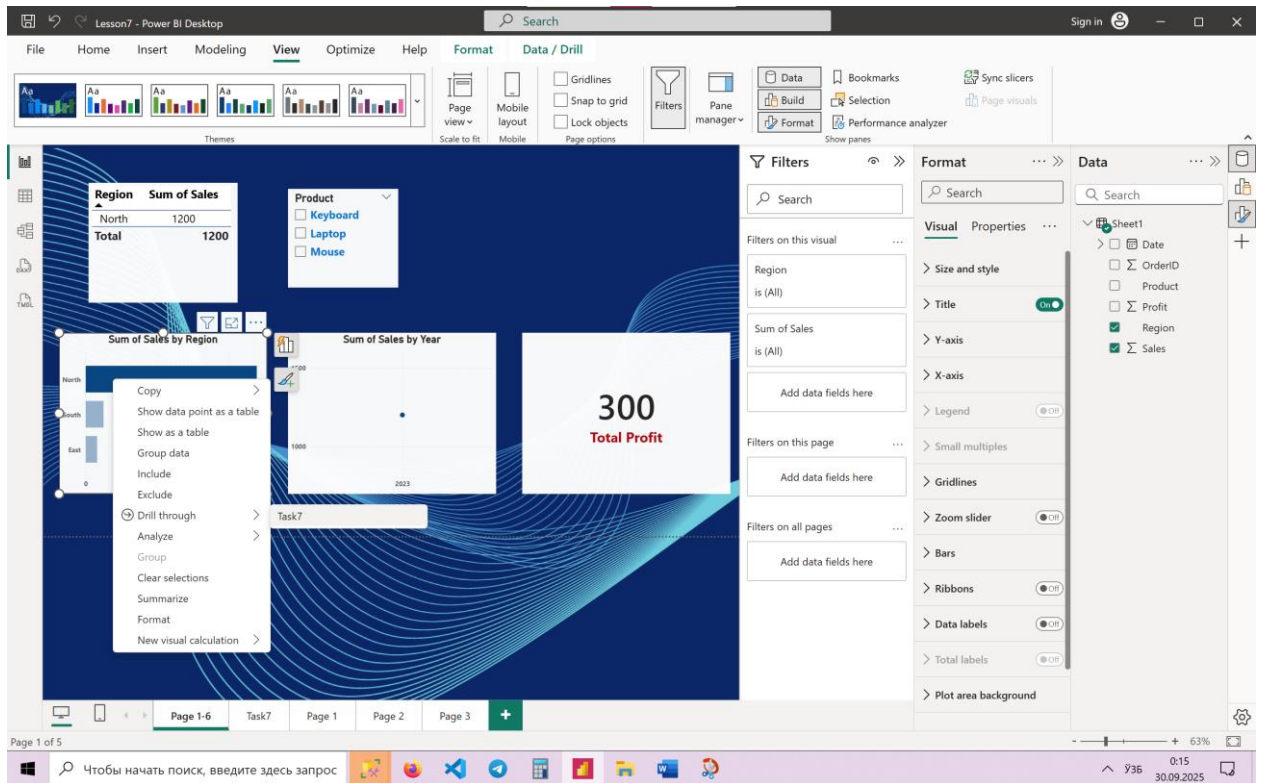

a Card:

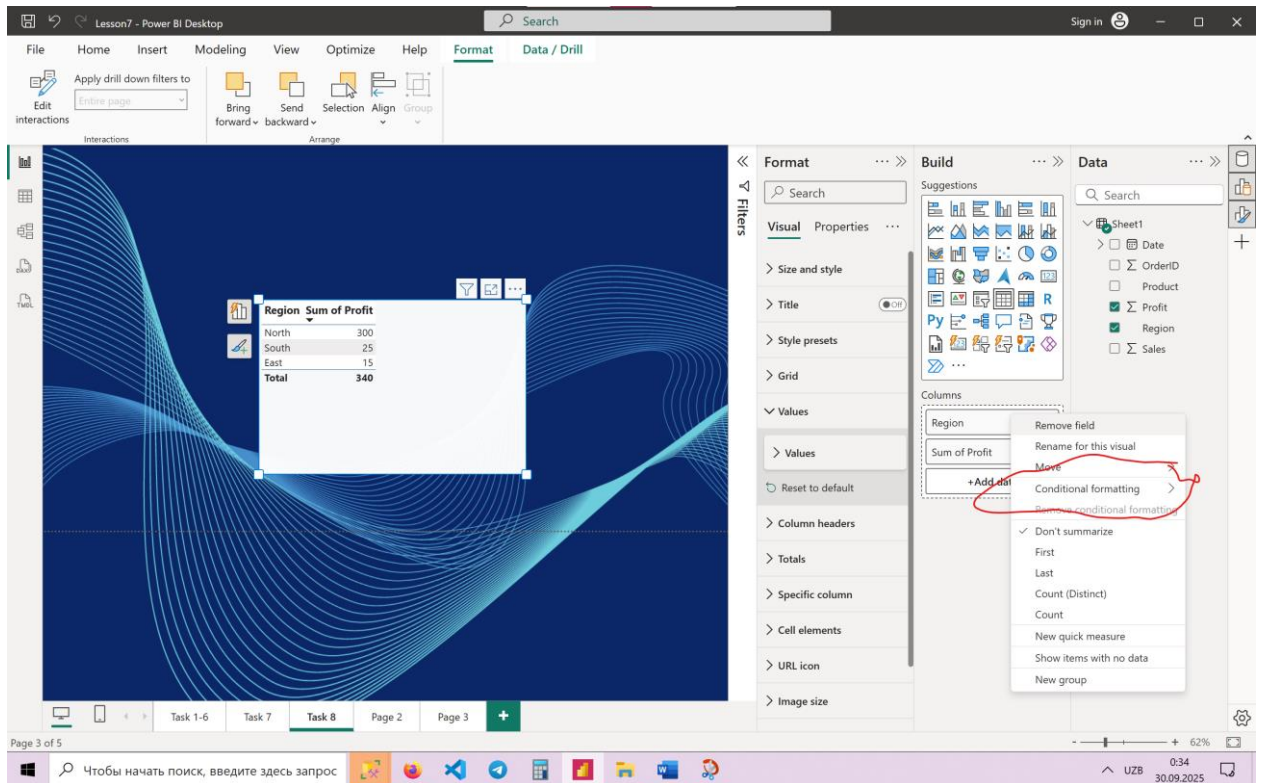

Step 7. Add a drill-through filter from Region to a detailed sales page

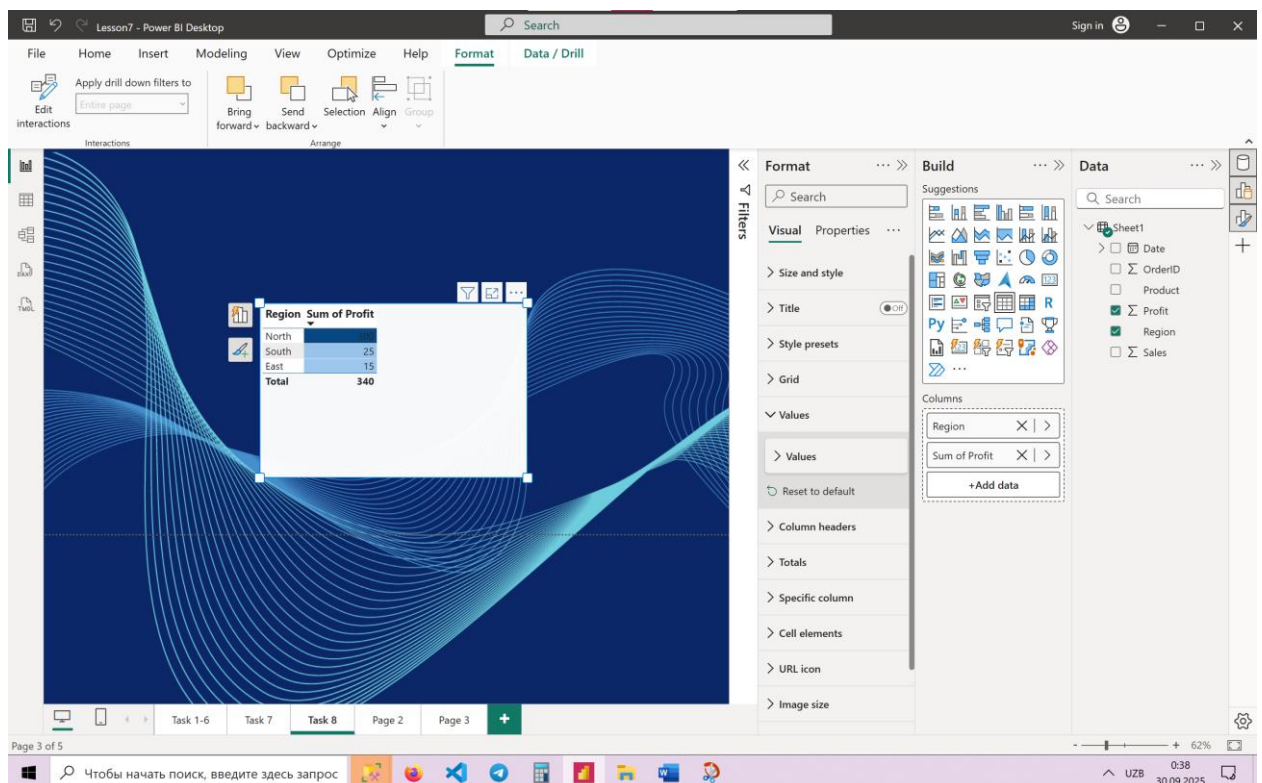

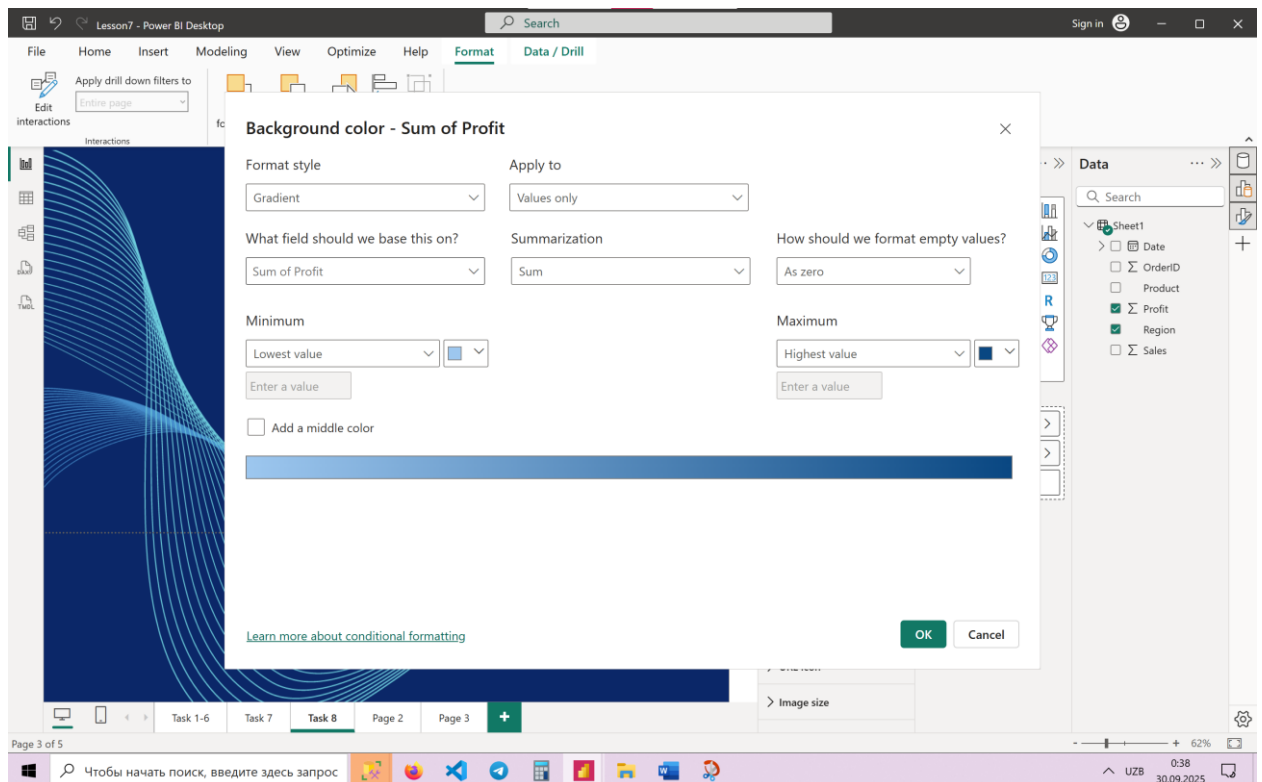

- Create a new page.
- Add a table with detailed fields (e.g., Product, Sales, Profit).
- In **Drill-through filters**, add Region.
- Right-click on a region in the main dashboard → Drill-through.

Step 8. Use conditional formatting to highlight high-profit regions

- Select the **table or bar chart** with Region and Profit.
- Go to **Format** → **Conditional formatting** → **Background color** (or Font color).
- Choose a rule to highlight regions with higher profit values.

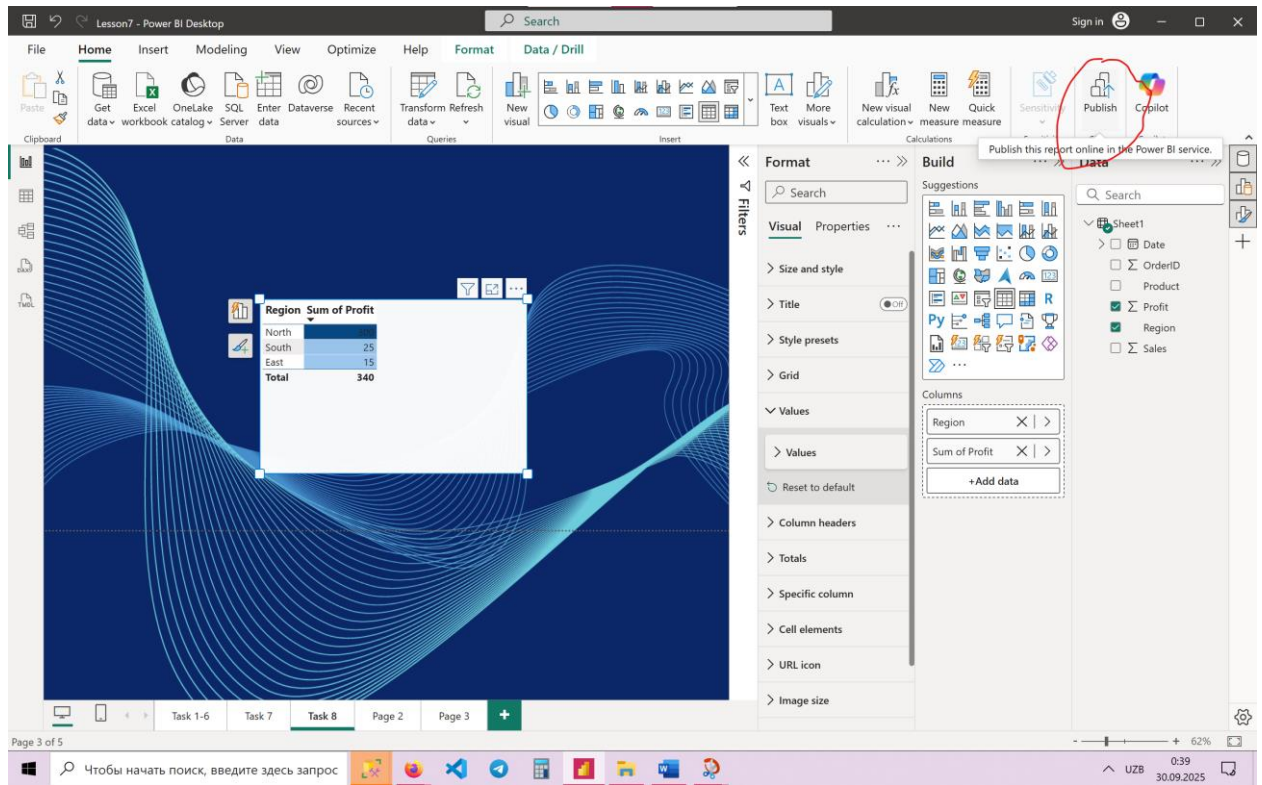

Step 9. Publish the dashboard to Power BI Service

- On the **Home** tab, click **Publish**.

- Sign in to Power BI Service.
- Select a workspace and confirm publish.

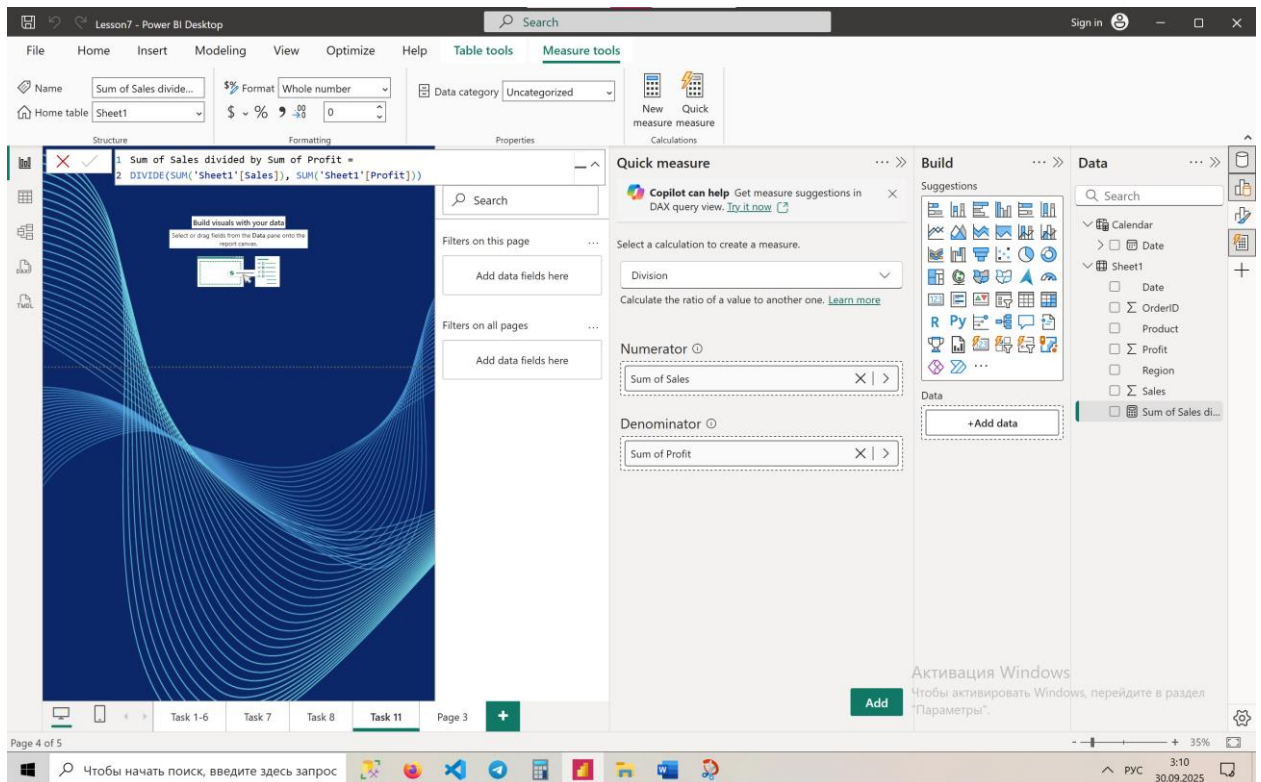

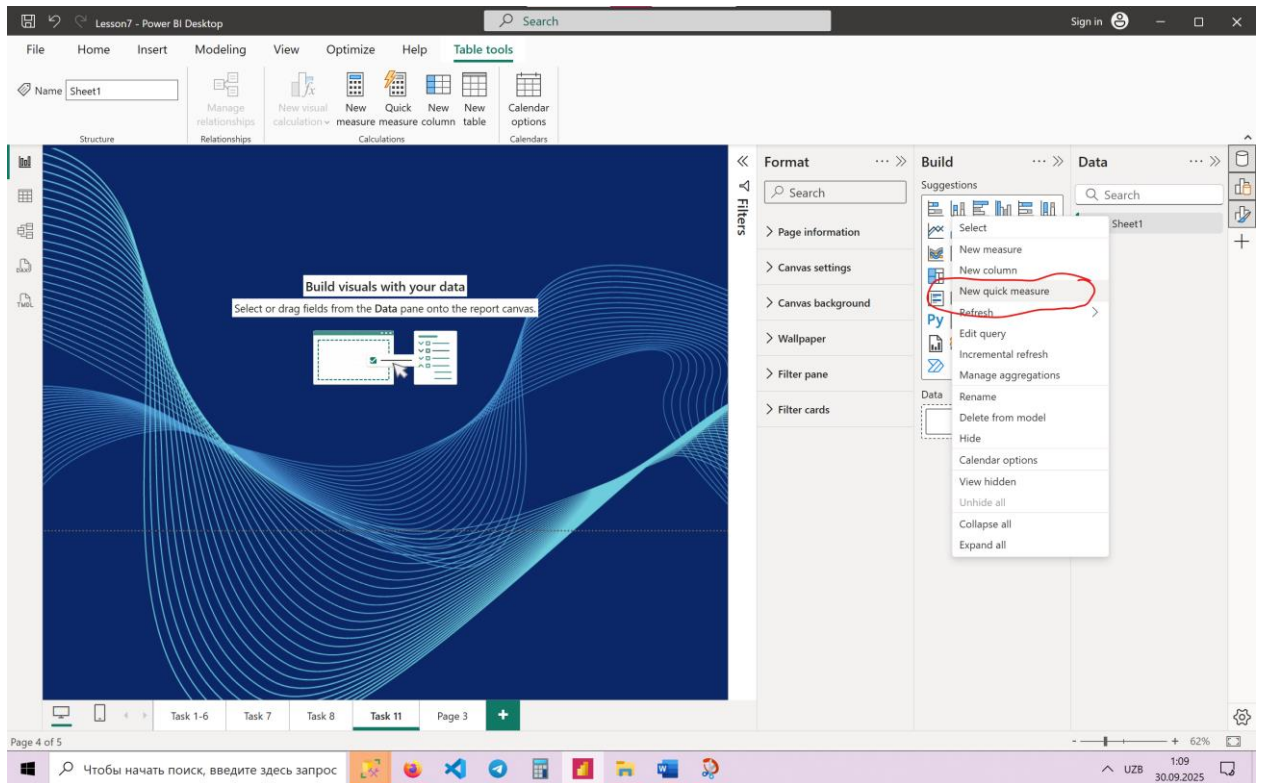

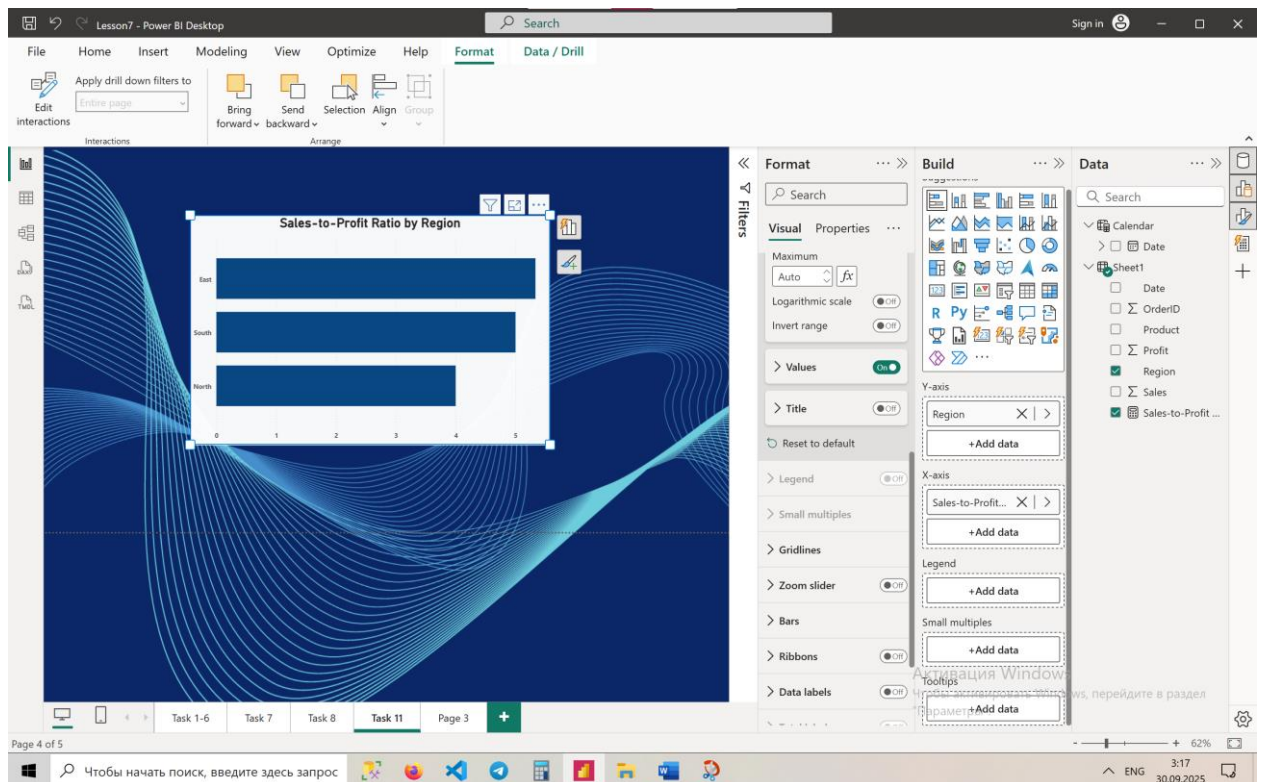

Step 10. Share the report with a colleague (simulate steps)

- In Power BI Service, open the report.
 - Click **Share** → enter colleague's email → click **Send**.
-

Step 11. Add a custom "Sales Growth %" measure without DAX (Quick Measure)

- Right-click the table in **Fields** pane → **New Quick Measure**.
- Select **Calculation** → **Division** or **Month-over-month change**.
- Use Sales as the base field.

Step 12. Optimize the dataset for faster refresh

- Go to **Model view**.
- Remove unnecessary columns or fields not used in visuals.
- Delete unused tables if any.

Step 13. Troubleshoot: Slicers not affecting all visuals

- Select the slicer.
- Go to **Format** → **Edit Interactions**.
- Enable filtering for all visuals that should respond to the slicer.

Step 14. Embed the dashboard into a PowerPoint presentation

- In Power BI Service, open the report.
- Click **File** → **Export** → **PowerPoint** → **Embed live data**.
- Insert the interactive dashboard into your PowerPoint slides.

Step 15. Set up a scheduled refresh for the dataset in Power BI Service

- Go to **Datasets** → **Settings** in Power BI Service.
 - Expand **Scheduled refresh**.
 - Turn it on, choose refresh frequency and time, then click **Apply**.
-
